General Comment

Hello. I am making this comment from the perspective of a concerned American citizen reading this plan for AI development. I do not agree with this course. AI, as currently deployed by applications like ChatGPT and others do not have a place in America's future. Artificial intelligence technology is not reliable enough and poses an existential threat to human creativity and ingenuity and should not have a place in any official operations of the United States.

The guardrails and obstacles to development exist to prevent unchecked companies from stealing swathes of data, artwork, and knowledge from millions of Americans. Artists of all kinds have their livelihoods threatened by the development of AI. The job market is falling apart as potential employees are rejected from online applications by algorithms and AI.

Artificial intelligence threatens our education as information once easily accessible on the internet is hidden away by corporations attempting to "Wow!" Americans with AI summaries. Children in our schools are passing with answers made by ChatGPT and missing entire years worth of development and education.

Please, I implore our leadership to change course and move America away from allowing AI to direct or inform our actions in anyway.

Sincerely,

-A concerned United States Citizen.
