General Comment

It is reprehensible that a company whose business model relies solely upon the back of untold amounts of unrecognized, unpaid creative work would be given a pass for unrestricted regulation to do what it pleases, solely for the reason of profit is nothing short of evil and should NOT be heavily scrutinized for its damage to its disinformation and misinformation practices that permeate online spaces. Allowing OpenAI to run freely places an ENORMOUS number of skilled workers at risk in numerous sectors of private and public business, workers that rely more on such work than investments for a nameless, faceless algorithm that cannot produce anything beyond what is fed into it. Its ecological harm, additionally, and variable energy requirements, are extraordinary in its scope to maintain and do nothing more than to produce low quality data with a net harm. Allowing AI to function with NO regulations to its private sector should absolutely NOT happen.
