General Comment

Maintaining copyright should not be considered an undue burden in the development of AI/LLMs. I work in publishing, and, like many other industries, there is no point in developing AI off human work, no matter how helpful the AI might be, if it diminishes human human ability to develop their work. AI innovators must ensure that their work does not impinge on the copyright of the people who initially developed the works. AI development thus far has not been respectful of copyrighted works, and this should be rectified rather than copyright abandoned.
