General Comment

AI is only a hollow shell of whatever it is feed. Allowing the ability to have those in charge of generative AI to take the likeness of other's works, written, drawn, music, voice, all of this will not only harm those in artistic fields losing their jobs to a cheap replica, but doing so by stealing it. Allowing less resurrections not only cut the massive artistic work force, but it is also bound to cause more financial problems. Firstly the huge amount of water and electrical power needed to support generative AI is immense, encouraging those looking for a quick buck will drain these more valuable resources. A whole 16oz water bottle is taken away with just a 100 words of generative AI. Secondly, allowing generative AI to take other people's work, legally, makes copyright harder for people to enforce. This is more so true for those smaller and have fewer resources than studios or large companies can and will outlast due to money and this act protecting them. After all they just used ChatGPT, who happened to steal another person's hard work without credit, without consent, and most certainly it will happen without compensation. AI is a hollow shell, if you feed it more it will only take. It will take away jobs, it will burn heavy valued resources, and prevent legal troubles in the field general AI target's most, the arts
