General Comment

I am against the current form of "AI" being pushed into a mainstream usage and letting it go uncontested with no protections to those it takes from. As someone who does work and in ties with others who work on imagery and text works, we have an interest in not letting "AI" take our works into its system that we do not approve of nor consent to use.

Below I will list some things that are problematic with "AI":

--Letting "AI"/corporate entities pushing for its unrestrained usage, have such free reign would be extremely damaging to creatives and current organizations that are creating art and other works. This would bypass copyright laws and lead to thefts of peoples hard work. This is because the current form of "AI" being pushed is not a actual form of Artificial Intelligence, rather a program that takes existing info fed to it and give results that are close to what the one who asks wants. It does this by taking the creations in both images and words of others(individuals/groups/organizations) without their consent and credit. It crushes and mixes it together through large power usage and puts through a product, that is a shadow of the works used.

--Some companies who have gone into this form of "AI" are starting to realize that the long term use of it is not profitable nor is it popular, ones who continue it usage can give unwanted results, even in some search engines give dangerous results.

--When it hits copyright not many individuals would not have much to defend against such open theft, the larger groups and organizations would have definitely have issues. Outside of The US, companies and groups would be further driven away with doing business if unrestricted "AI" usages steals their assets and there is no protections. Within the country the back and forth usage will cause a self poison of the "AI" programs and put out unexceptional "work" or dangerous info/image results.
