General Comment

Understand that LLMs and Generative AI, as used by companies like OpenAI, represent a fundamental threat to the protections provided to creators under current US copyright laws. AI of this nature must be trained on copyrighted work to be effective, and training on copyrighted work means that any output is ipso-facto derivative and owes creation to said copyrighted work. As such, I urge the government to place regulations on AI to prevent them from training on copyrighted work without due compensation to the creators of such works.
