General Comment

As a creative both professionally and personally, I do not believe AI has any benefit to the future of America. My colleagues and I have already seen the devastating effects this technology has - some have been replaced at their jobs by an algorithm that was trained on their work (without their knowing and consent), while others, who work in the medical field, have seen it integrated into their workspaces to disastrous results.

Generative AI in particular is built upon works stolen from others: OPEN AI, ChatGPT, and the like scrape the internet for content to train on without the consent or compensation of the creatives who made it. This is a well-documented fact, admitted by the heads of the companies themselves. They've been recorded as saying that their technology can't work without the things they've scraped, and they can't afford to pay those they scraped from for their work, and you know what? YEAH. THAT'S HOW IT WORKS. IF YOU CAN'T PAY FOR A GOOD, YOU DON'T GET TO HAVE IT. Ask me how I know, and I'll show you my bills compared to the things I'd love to have, but can't afford.

I get that the wealthy people in Washington don't care about us, but some of us are barely making it as it is, financially. It has no benefit to the future of America, and has been widely unpopular in public opinion. No one wants this except the folks on top who benefit financially from stealing from those of us on the bottom - so please protect us from it, please. Thank you.
