## General Comment

While machine learning technology has many potential applications in many different fields, the use of this technology by OpenAI and similar entities to plunder the intellectual property and private information of countless people at a scale this unprecedented must not be enabled or allowed!

The avenues for rightful copyright holders to receive compensation for their work's use in training data should be opened, and restrictions should be placed on these entities accordingly.

This is to say nothing of the energy costs and ecological impact of these models, which as of right now is highly inefficient and wasteful.

OpenAI and companies like them must at the very least be held accountable for these practices, and I should hope the proper actions are being taken to that end.

Thank you, and God bless.

P.S. Also them switching from a non-profit to a private corp is super scummy! What's up with that?
