Name: Anonymous Anonymous

General Comment

The training of LLMs or other AI models must not be allowed to violate copyright simply because "if we needed to pay to license all of this material, we couldn't stay in business." A company that cannot afford to pay for the raw materials it needs in order to exist need not exist, and "stealing these materials because we cannot pay for them" is essentially a criminal enterprise. We've seen numerous examples of AI companies licensing content on the internet (e.g. OpenAI is paying Reddit for the use of their web content as its corpus) so companies should never receive a pass for effectively pirating content in the pursuit of "training AI". This is essentially "robbing Peter to pay Paul" and the entire creative enterprise of humanity is more valuable than whatever nebulous value AI would bring in the future.
