General Comment

I do not believe that OpenAI, or any form of generative AI, can exist and train it's data in good consciousness. To demand access to the hard work of others for the sake of stealing it and claiming it under your own creation is theft, not to mention how much of this is and will be done without the consent of creators. These creators are the ones putting in the real effort into honing a craft and perfecting a skill, OpenAI can only make a poor attempt at mimicking what is a uniquely human trait of creation. I don't think we should be expected to roll over and accept a total breach of personal data simply because tech giants want it. I would not and will not ever consent to my own works being trained on.

Who's to say these tech companies that make promise of "helpful" generative AI won't sell *our* data *our* works and info to the highest bidder? We are not data to be bought and sold as pleased. People are already hurting trying to find work and support themselves, the forced normalization of this AI will only exasperate this as businesses seek reasons to cut costs and replace real humans to do their work. Allowing OpenAI to continue like this must be resisted.
