General Comment

I personally do not think that AI should have a place in the future for content such as voice acting, digital art, video making, etc. Too many times where I see art on google and it turns out to be just AI generated. I am also not a huge fan of seeing movies and shows that I love use AI just to cut around corners. I don't want to go into the movies and the first thing I see at the beginning of the movie is an AI generated image. To me, that tells me that whoever made the movie doesn't care how its made, all they want is money and that ruins my movie experience. Yes, you probably have seen the multiple "hype" around AI regarding people online or even companies using it such as Marvel/Disney. Though this just makes a more worse product that was just made in a rush and wanted a quick buck.
