General Comment

Under no circumstances should the right to private property be infringed by AI companies, developers, or anyone else. Generative AI can, and has for years, continue development on public and free information only. In addition, there is no need for artist AI or author AI. The only real utilities for AI are as informers to or assistants to humans. AI "art" is not real art, and if we allow the proliferation of it, we will eventually reach a point where the AI is learning from other fake pieces of both art and literature to produce new content. This will inevitably lead to major decline in the quality of our cultural corpus and the threat of cultural regression.
