General Comment

I work in tech. It is critically important to have strong, smart regulatory guardrails in place now, because fixes after the fact of harm are going to be too late. People have rights to their data and their creative property; these need to be preserved. Keeping people safe and their copyrights intact will hardly slow the development of AI at all, given the current pace. Instead, it will help developers make wiser, human-centered decisions. This doesn't need to be a conflict if regulators can listen to creators and work together, instead of in opposition. As it is, this action plan proposes harm, not help.

Fair compensation for work.
Human-centric development.
Well-regulated, safe AI.
