## General Comment

AI as we know it today is infringing on the hard won copyrights of Americans as well as their freedom and privacy by indiscriminately scraping the internet of materials. The technology is also deeply flawed. It is proven time and time again that generative AI produces incorrect, flawed, and even dangerous answers when posed questions. Companies using AI often find themselves doing more work to compensate for it's short comings. As a private citizen, the growth of AI and my inability to opt out of it has been alarming. I feel my privacy, a freedom I am allowed, has been breached, particularly with how easy it is to use someones likeness in AI and create defamatory images of myself and others. The expenses of running AI facilities to will cost the American tax payer, all whole robbing them of resources such as the same electricity running the stations (experts suggest the demand for AI, if not curbed, will cause black outs due to power consumption). I also worry about investing in a technology which is making Americans less self sufficient. These companies are often asking us to let AI make our choices and I cannot think of anything less American then allowing yourself to be controlled by the whims of a machine.

My suggestion is at this time to no longer put such a focus on developing AI, and put those resources elsewhere.
