General Comment

As a nation, we need clear, transparent, publicly accountable and thoroughly publicized regulations limiting the ability of Artificial Intelligence to obtain, process, adapt to, utilize, deploy and, simply, to use personal private data that is collected through the auspices of the federal government. Moreover, strict regulations need to be imposed on the deployment of AI models to automate governmental processes and to present options to human decision-makers. Without strict, publicly accountable and fully transparent regulations, we will be unable to discern whether these models are an improvement on human decision-making or who ultimately has made any particular decision. The problems of accountability are rife. Stop all efforts to speed up the development and implementation of AI models without robust, accountable, transparent and fully disclosed regulations and rubrics. This is too important to rush.
