General Comment

AI has been over-hyped and over-saturated as this "magical" tool to do spectacular things when in reality, it just takes what human-made concepts and artwork, and regurgitates them without the human-made aspects, essentially deleting and stealing hard-working efforts made by others. Those who sing its praises do not see its potential harm it does in the long run for our planet and people's livelihoods. Or that they just want to benefit from others' suffering or from other people's hard-work.

They simply do not offer any value to anyone except for those who sees other people as "content" or "resources" to feed into their AI machine.

In summary, AI is tool thieves uses to steal from others, there is no other angle to look at it from. And it holds no meaningful place to exist for people.
