General Comment

Generative AI is unethical, immoral, and will lead to numerous problems if allowed to continue to steal intellectual property. It will allow OpenAI and similar organizations to steal content from hard working Americans in order to eliminate huge numbers of jobs, spiking unemployment and flooding markets with inferior, and potentially dangerous products. It will disincentivize more and more Americans from being able to develop productive skills and cause critical thinking to atrophy. This will inevitably lead to brain drain as high quality, professional workers will be harder and harder to come by in America, and the United States will slowly but surely slip into irrelevance and obscurity in technical and creative fields.

<https://www.mdpi.com/2075-4698/15/1/6>

It is a technology fraught with danger that robs and pillages everyday Americans in order to generate useless nonsense that is only correct by sheer coincidence. For all of our sakes, the United States should abandon AI or at least severely restrict what AI organizations are able to pilfer without consent or compensation.
