General Comment

AI, and the large language models developed by OpenAI, is being deployed in ways that harm society. They harm learning, and they make inhuman decisions that take people's lives without accountability. They are incapable of understanding the importance of facts — they simply use past patterns to predict future text, with no guardrails to guarantee that their results are useful or true.

I work in a field where machine learning has been a tool used to make great strides. It can be extremely useful in the hands of someone who understands the constraints of a problem domain. The problem is that OpenAI is being marketed as a do-all solution when clearly it is not. The model relies upon a human-created corpus of work and intellectual contribution to produce its predictions. Altman himself has acknowledged that the field is at a point of diminishing returns and can not advance more without access to more human-created corpus. He can not make more money without stealing copyrighted work, that is what this boils down to. Don't let these vultures strip our society and the accumulation of human knowledge bare for a sham "artificial intelligence" party trick.
