General Comment

Analytical AI is great. Analytical AI advances science and progress and is a boon.

Generative AI is hallucinogenic slop trained on stolen works.

Protections must be put in place that prevent corporations from stealing the hard work of Americans without consent or compensation to produce a sub-par product that doesn't even deliver on it's own over-inflated promise. Several copyright rulings have all ready shown these companies have zero ownership of what their AI "creates", because algorithmically generate slop was not created by a person. It makes zero sense to keep funding this with taxpayer dollars, and it must be clear that the ingenuity of hard-working individuals remains protected from corporations.
