General Comment

AI must be regulated in some way, shape, or form that protects the creative human people from which it harvests its data. We can no longer call things made by a machine “art” and I believe it is a gross misclassification. You made a collage, you made a picture. AI is the absence of creativity. AI is the death of ingenuity. It will never be able to exist without artists and its existence as it is now loses our jobs. Do you really want your kids to grow up on AI slop? Do you want your baby to be read a nursery rhyme created by an algorithm? You are soulless if you believe it can and should continue to remain unregulated.
