Request for Information on the Development of an Artificial Intelligence (AI) Action Plan - Public Comment

March 14, 2025

From:
Tatem Hughes
Jeweler

Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

I am an everyday American who works full-time sustaining myself with my work as a jeweler. I have hobbies in enjoying the arts made by real life people, and want to keep it that way. Where art is made by people for people; not some drivel made by machines built off of theft designed entirely just so businesses don't have to pay people money that they need to make a living and survive.

The AI systems made by Big Tech companies like OpenAI (Microsoft) and Google threaten to destroy thousands of American small businesses with their recent demand to create special carve outs in copyright law.

AI systems can only be produced by first training on work made by people. The work of hundreds of thousands of everyday American creators was taken and fed into these AI systems without their consent or any compensation. They ingest their work, reassemble it, and then sell it back to their clients – directly competing with them and cutting them out of the marketplace.

Now these Big Tech companies are asking this administration to create exceptions and loopholes to make this practice of stealing American creators' copyrighted work legal precedent. They are suggesting that if a machine ingests and reproduces copyrighted work, it is somehow suddenly "fair use".

They seem to believe that anything and everything on the internet – regardless of who owns it – should be theirs for the taking. They claim that if this administration does not allow them to rewrite the law in this way, it will stifle American innovation.

Instead, it will have the opposite effect. The purpose of American copyright law is to protect the incentive to create and innovate.

If we the American people do not own our creations, and everything we put online will be stolen by Big Tech giants, what will be the incentive to create? If everyday Americans create a new innovative piece of computer code, a new visual design, or a new piece of music only to have it immediately stolen by Google and Microsoft, why bother creating it in the first place? How could they possibly make a living doing these things?

Want to protect American innovation? Protect American creators. **Do not create new copyright exemptions that allow Big Tech companies to exploit and steal from creators and everyday Americans without permission, compensation, or transparency.**

This administration's AI Action Plan should focus not on giving away creator content to Big Tech companies, but rather on ensuring a fair marketplace with competition:

- First, the government should ensure that creators and everyday Americans give effective **consent**, so that we can decide when and where their work is used by AI systems.
- Second, the AI Action Plan should encourage a robust **licensing** marketplace, so that the incentive to create for small businesses is preserved. Their work has immense economic value, so the value generated by that work should accrue to the original creators, not just Big Tech.
- Finally, the AI Action Plan should require **transparency** from Big Tech companies, requiring them to disclose what material is in their training datasets, and label what content is AI generated.

I am not anti-technology or anti-AI. I am consistently impressed by the capabilities of these AI systems, and find them incredibly useful for many things. But we should not sacrifice the hard work of hundreds of thousands of Americans and give it away to Big Tech by rewriting copyright law.

Thank you for the opportunity to comment on these important issues.
