## General Comment

I believe that If the United States were to go with this Action Plan, then I believe that there should be used for the medical field and to help predict things like hurricanes, tornados, earthquakes, and other things of that nature. I wholeheartedly believe that Ai SHOULD NOT be used for the production of Entertainment such as Video Games, Television shows, Movies, and all other forms of entertainment. I also believe that there should be copyright protections that prevent companies to be able to use other people's property without consent or proper payment. I also believe that it would be very dangerous for us to use Ai for certain things like in our Nuclear Arsenal because almost everybody has seen Terminator or heard about it, also, it would be dangerous to implement it in the news and making things that we've already seen on Social Media with misleading posts and images created with AI and the bots on X and other platforms with the only command being to spread misinformation. Lastly, I believe that using fossil fuels, coal, or any other non-renewable energy is the stupidest thing we could ever do and should opt for Nuclear Energy
