General Comment

I do not believe that AI in it currently state is viable enough to help national security overall. Much of current models are trained on information and images whose creators are not fairly compensated. I believe continuing down this path will ultimately result in a diminished national security and society as we will forsake the ingenuity and creativeness that comes from human effort, resulting in a stilted overall society and a national security unable to quickly deal with threats or have inaccurate assessment on situations due to inaccurate or junk data fed to the AI algorithms.
