General Comment

I am a librarian and information technology specialist. I could list hundreds of articles discussing the dangers of so-called Artificial Intelligence, the value of copyright and how most of these programs do not work as advertised. They serve no purpose beyond eliminating American jobs and create far more problems than they solve. I have compiled a list of studies and sources which prove that AI is only of value to hucksters seeking to make a fast-buck and a new generation of robber barons who seek to steal what they cannot buy.

I have attached a document containing a sampling of the best resources which show that what is called AI has no value and the copyright laws of United States must remain intact and be enforced.
