General Comment

At present AI produces bilge on the basis of mass IP theft, it can produce that bilge in vast quantities at high volume and is incapable of being reviewed for veracity, hallucinations etc. as rapidly as it is capable of being produced.

The NSF in producing an action plan for AI must not act with complete disregard for copyrights and patents or intellectual property law. I find it ludicrous that the NSF wants to establish theft as policy, especially in light of Sam Altman's frequent public declarations that Open AI is unprofitable without massive IP theft, it sounds like his product isn't economically competitive and shouldn't receive a government agency contract or sanction. The notion that National Security, Economic competitiveness, let alone human flourishing can only happen when Open AI is allowed to corrupt data and (continue) to steal the intellectual property of others is idiotic. Open AI's commercial uses are comically unreliable, and should not be allowed unfettered access to the intellectual property they have not paid for, let alone government systems.
