General Comment

The increased integration of and reliance on AI has made navigating the internet extremely frustrating. There is often no option to remove AI assistance. This makes using search engines frustrating, as the AI summary is often wrong, or at least misleading. It's not always clear where it is getting the information it is attempting to summarize. It also makes using pretty much any social media extremely unpleasant. AI generated content clutters feeds with visual junk and spam accounts are created faster than I can block them. What is especially troubling are the ones that present themselves as journalistic or scientific sources. The information they provide is often blatantly false and, with social media companies reducing their fact checking and admin teams, this is setting the stage for a dangerously misinformed public.
