General Comment

The "unnecessarily burdensome requirements" mentioned in the quote "to ensure that unnecessarily burdensome requirements do not hamper private sector AI innovation" are copyright laws. I have a great searing desire to use a plethora of curses at how immensely ignorant that phrasing is in the context of the very functioning of our way of life and to the fair application of the law to all parties within our nation, but instead, I'll simply write it in plain English. No. It is not ok in the slightest, for any organizations, especially private sector organizations, to use copyrighted materials unfettered when the rest of us are required to adhere to copyright laws. There is absolutely no way that could be interpreted as anything except corruption of the government. For one party to be excused from the law itself, a law that has historically bound us as the people of the United States of America to a standard of respect towards the ownership of our respective ideas, is to break down the legal and moral fabric of our country to that of different laws for different effective castes of society. This is the formation of untouchables who can steal *your* or a loved one's ideas whose AI/s would then be used to replace *your* or a loved one's job, put *you* or a loved one out onto the streets, and ultimately to enrich themselves on YOUR or a loved one's hard work without any way to fight back against them. The AMERICAN DREAM will die forever with this executive order. Also, just to make it even clearer, it is UNCONSTITUTIONAL.
