General Comment

The current use of AI has been problematic due to the division of its uses, for one side it has been beneficial as a tool to do impossible or hard works on hard working labors such as medicine, engineering, etc. Otherwise others uses of the AI have been of irresponsible or are outright non beneficial to anything in particular but to replace the creation of human culture, these actions have damaged artists communities due to the cheap use of ai to replace said people pulling them out of their business. AI is a tool that must be used to do what we can do, not replace just for the mere fact that it's cheap and easy, otherwise we could say that the current or even future technological advancements could easy replace all other jobs outside Art. We need the authenticity and soul of art because of it's uniqueness, not because it's merely a hobby or something industrially made. Everyone will eventually get tired of the soullessness of AI that it will be deemed as a negative thing for companies and it's reputation. So please, stop looking at us like we're disposable, thanks.
