General Comment

Existing copyright law must be maintained and protected in the age of AI. To dismantle copyright protections for the temporary and short-term benefit of corporations is a resoundingly bad economic idea; not only will it make all pursuit of creative work as a way to make a living in the US untenable, it will turn American corporate claims of copyright protection into a global laughingstock. If AI cannot exist without pillaging private work, then the markets should not support it. If the public good of AI is deemed to outweigh private control, then it ought to be put in the hands of public control at a rate of just compensation as dictated in the constitution, not handed over for free to profit corporations.
