

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-zoh2-ak9i
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-6015
Comment on FR Doc # 2025-02305

Submitter Information

Name: Douglas Brown

[REDACTED]

General Comment

I am a public educator with 30 years of classroom teaching experience. The use of AI in the classroom should be with guard rails so that the protection of intellectual property and copyright material is protected/preserved. It would be very negligent to remove these and/or not provide any of these guards and allow students to compromise copyrighted material.

The use of AI should not be allowed to scrape the data of any copyright materials as well (written, spoken, audio, music, art, etc...). This is protected material and should remain protected against AI data scraping as well.

The use of AI in general has a very large and negative environmental impact with excessive usage of electricity and water for powering and cooling the data centers that are providing the computing power on the back end. (There are plans to re-commission old power plants just to provide the power for data centers that are powering the AI processing being needed.) Again, regulations and guards on these data centers must be mandatory so that they are carbon neutral or BETTER for the environment and not worse for the environment.
