General Comment

AI does NOT hold a place in the future of the United States. It is actively stealing from and harming people by stealing the creative works that they rely on for income. By allowing companies such as OpenAI to have as much access to creative works that people put immense amounts of time and effort into as they want, it will cause economic difficulties for many, and OpenAI has specified they will not be requesting permission, which means they will only be stealing from people even more. This is unethical and should not be allowed under any circumstances. AI cannot replace people - it cannot replace the quality and care that human beings put into everything that they do. If we choose to rely on AI for matters such as national security, it will only make vital mistakes and errors that will cause more harm than good, because no matter how much AI is trained, it will never be able to create things like people can. It is not reliable as a source of information, it is not reliable as an accurate image generator, it is simply not reliable at all for such crucial matters as national security. Do not remove the guardrails around AI - if anything, make the guardrails more intensive. Do not allow this country to be run by AI.
