General Comment

Ai in this current form is unacceptable. It's creation requires: destroying everything we believe about ownership of our own creations, making people do the worst most soul crushing job possible of categorizing mass amounts of data, using mass amount of energy and resources which contributes to climate change. And what do we gain out of it? A machine capable of averaging mass amounts of data to make something familiar to all the data fed to it.

How can this be worth the immense cost of its creation? What does this do positively for good actors? Bad actors love it as it let's them do a variety of horrible things. Some examples: non-consensually creating pictures of people, potentially with fewer clothes than they prefer to be publicly wearing. Firing artists of all types from all professions and replacing them with something that kinda vaguely seems like it creates similar work when it will in actuality never create something unique or valuable. Create and execute scams with believable pictures of people or bots that act like people.

We can not support "progress" like this, it is simply another scam just like web 3.0, bitcoin, nfts. It just has many more horrible uses that giant corporations and scammers love. America is supposed to be about individuality, so let's not support the bit of software that averages and flattens mass amounts of people and their work. Choose humanity.
