General Comment

Hello. my name is Mr Yergeau and I am the owner of the independent studio Starlight Comics. As a studio primarily concerned with the creation of comic books and animation we are extremely concerned about the wild west that is the current AI landscape, and find the current attitude take by big tech to be anti business and anti consumer. Our primary concern is the consumption of data by the AI companies. They currently have been feeding on any data posted online, completely ignoring copyright laws. We put a lot of hard work into our products and we are fiercely protective of our IP, as are many companies, such as Disney for instance. Just as a television station cannot air what it does not have the rights to, or as a movie theater cannot just show any movie it wants without permission, so to do we believe an AI cannot use our data without permission. Any AI trained on web data must be done only with the full consent of the IP owners, otherwise what is even the point of copyright law. It could be dangerous if the AI companies are given cart-blanch to troll the internet for data, as we believe it could pose a national security risk. what if they accidentally manage to retrieve sensitive and confidential data and feed it into their systems. What about private personal data? It is all very concerning and we believe big tech needs to be reigned in.

In short:

-Big tech should require clear, written consent before feeding on privately owned IPs and media.

Thank you for your time.
