General Comment

I believe that Generative AI (i.e. the type of AI discussed in this Plan) is not going to be helpful to the American public. I hold this opinion because of the following reasons:

- 1) Generative AI is a novelty at best and useless at worst. It should not be used in ANY amount of official capacity, and is largely overhyped by its creators, who are more interested in money rather than creating a product that serves a purpose.
- 2) Generative AI in its current state cannot exist without stealing from human creators. This is a fact that every single GenAI developer has stated in legal filings. Thus it should not be funded or supported in any way until they have guaranteed the ability to pay people for their training data AND its usage in generating prompts.
- 3) Generative AI is stuck in a murky area of copyright law. Removing guardrails will only confuse the matter even further.

Generative AI has no place in the United States beyond that of theft and scams. Keep it out. Especially anything related to Crypto.
