General Comment

OpenAI is theft, pure and simple. If they are allowed to function by using copyright-protected material without paying appropriately to the rights-holders IT IS THEFT.

If this government is working toward closing off the Internet into tiered systems, then it understands the value of the data on the Internet. As such, any use, by the government or private corporation, to train AI should be easily understood as theft.

So either create your own dataset, pay the rightsholders a fair sum for use, or toss the project.

If your argument is that you can't use AI without that data, then you can't survive without theft.
