General Comment

We're taught from an early age that if you work hard and dedicate yourself too your craft, you can succeed in America. As a writer, I have done exactly that. Writing is my livelihood, for which I should be fairly compensated. AI cannot duplicate the creativity and innovation of human thought, and yet AI companies are willing to steal my work to train their deeply flawed programs.

The United States doesn't need AI to succeed - in fact, the errors these programs introduce put us in more danger. We should instead encourage, support, and pay human beings to do the jobs Open AI and similar companies would take from hardworking Americans and those who come to this country seeking opportunities and contributing to its success.
