## General Comment

This is a completely unnecessary plan for the government to partake in at this time. AI may not be a fully developed technology, but it's not necessary to push for right now when more pressing matters are to be addressed by the government at large. Namely, ones they caused themselves via aggressive attempts at foreign policy, with publicly and notably poor results. It should be the US's best interest to level out those situations among others before focusing on something as trivial as AI data collection.
