General Comment

While I have no opposition to further research on artificial general intelligence (AGI), this action plan needs to exclude generative AI from its scope. Generative AI has shown no potential towards the creation of AGI and only exists as a mildly interesting auto-complete function and image generation tool, one that is being marketed to unaware consumers off of promises it can never fulfill. Additionally, the fact that generative AI is trained off of copywritten work without payment or attribution makes it a danger to all aspects of the economy (artistic and otherwise). If anything, generative AI needs additional restrictions placed upon it, and my fear is that if this plan covers it, it will have adverse effects upon the American economy and America's role in the development of global-reaching media and culture.
