General Comment

While AI does have its benefits in certain departments it can also be very devastating. Small companies like artists and indie music composers will all suffer from the use of generative AI. Even voice actors for animated movies and shows will also suffer job losses from the use of generative AI. In the grand scheme of things more harm will be done than good if AI is permitted to make stuff like art, music, and play voices. Another issue AI has is that people may get too used to using AI and stop thinking critically. This can harm even professional businesses, doctors, teachers, and the general public. The use of AI should be limited if not completely disregarded. Laws should also be put in place that make it illegal for users and AI to use voices, music, art, or any other form of copyrighted or personal invasion as it could lead to consequences for the person who created such media or has said voice. Afterall, we don't want people using the voice of, lets say, a high ranking government official to send bad messages across the globe which may cause harm to the reputation of the country. This should be the same treatment for everyone as well.
