General Comment

Hello,

As an artist and content creator I think it is imperative that the rights of artists, creators and individuals not be infringed upon by artificial intelligence and its creators. I believe that ai should never be trained on materials which are not public domain, not up for free use, or not otherwise available whether by volunteer or agreement to be used. Ai can be deceptive, easily exploit individuals or be used for other harm if trained in an unethical manner. We, as human beings and citizens of the usa have a right to defend our individual rights, which includes the right to our personal image and the right to copyright our works of art. Thus, any plan or agenda made should respect copyright and respect individual privacy (such as making it illegal to train ai on pictures of individuals or documents which could exploit an individual's image, rights, or other records).

AI companies have a right to hire workers who can write, code, create art, or create content to train their ai model with. Using copyrighted or otherwise personal and private art is unethical, and unlawful, and should never be an option.

Thank you for a chance to post my opinion.
