Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

I am an American artist who runs a small business which provides commissioned work for clients.

Artificial Intelligence systems made by companies such as OpenAI (Microsoft) and Google threaten to destroy thousands of American small businesses like mine with their recent demand to create special carve outs in copyright law.

AI systems can only be produced by first training on work made by people. My unique work, and the work of hundreds of thousands of other everyday American creators was taken and fed into these AI systems without our consent or any compensation. Our copyrighted work is taken and used to produce nearly identical works, directly competing with us and cutting us out of the marketplace.

Tech companies are asking this administration to create exceptions to make this practice of stealing American creators' copyrighted work legal precedent. They are suggesting that if a machine ingests and reproduces copyrighted work, it is "fair use".

They seem to believe that anything and everything on the internet – regardless of who owns it – should be theirs for the taking. They claim that if this administration does not allow them to rewrite the law in this way, it will stifle American innovation.

Instead, it will have the opposite effect. Violating the copyright of individual creators and reassembling their works creates a stagnating effect on cultural and artistic development, in addition to directly impeding on existing businesses.

If we the American people do not own our creations, and everything we put online will be stolen by tech corporations, what will be the incentive to create? If everyday Americans create a new innovative piece of computer code, a new visual design, or a new piece of music only to have it immediately stolen by Google and Microsoft, why bother creating it in the first place? How will we possibly make a living doing these things?

Want to protect American innovation? Protect American creators. Do not create new copyright exemptions that allow Big Tech companies to exploit and steal from creators and everyday Americans without permission, compensation, or transparency.

This administration's AI Action Plan should focus not on giving away creator content to Big Tech companies, but rather on ensuring a fair marketplace with competition:

First, the government should ensure that creators and everyday Americans give effective consent, so that we can decide when and where our work is used by AI systems.

Second, the AI Action Plan should encourage a robust licensing marketplace, so that the incentive to create for small businesses is preserved. Our work has immense economic value, so the value generated by that work should accrue to the original creators, not just

Big Tech.

Finally, the AI Action Plan should require transparency from Big Tech companies, requiring them to disclose what material is in their training datasets, and label what content is AI generated.

I am not anti-technology or anti-AI. I am consistently impressed by the capabilities of these AI systems, and find them incredibly useful for many things. But we should not sacrifice the hard work of hundreds of thousands of Americans and give it away to Big Tech by rewriting copyright law.

Thank you for the opportunity to comment on these important issues.
