General Comment

AI ACTION PLAN

Sir:

the recent work of the organization Open AI, as communicated to the world through the release of ChatGPT, leads me to believe that both current and potential developments in artificial intelligence call for watchfulness and, indeed, quick action on the part of your administration.

We find ourselves in a situation not wholly dissimilar to that prior to the Manhattan Project, where the potential to develop a powerful new type of bomb existed for the Allies and for Germany. Today a global race for expanded AI capabilities has begun without adequate governmental oversight. Beyond this, any future advantages in AI by China or other adversaries that would alter the balance of power militarily or in other spheres must not be allowed to happen.

As FDR did with the Manhattan Project, you may find it desirable to put in place an organization under direct government control which is empowered to bring together the resources and talent needed to accelerate developments in AI and coordinate with other organizations. No one knows what future progress in AI may occur, how quickly, and how it may impact American national interests. What is clear is that potential for the development of future powerful AI technology exists and must not be left solely in the hands of non-governmental organizations and corporations.
