General Comment

Gen AI is ruinous.

Gen AI is not intelligent nor does it think. It brings patterns together based on what was fed into the programs. Gen AI is a runaway plagiarism machine spitting out more and more misinformation than what we can handle. It cannot give out reliable information, it can only give approximations based on similar patterns, a la Google AI advising you to eat poison ivy. It is not information, it's simulacrum of information.

Usually the data fed to it is private, copyrighted and taken without consent. If a program needs to be feed private stolen information, that program should not be allowed to continue. AI has scraped data such as children's photos, personal medical records and copyrighted work to be put into their databases. People can easily make revenge child pornography if they want to.

Gen AI is horrible for the job market. The very most wealthy are salivating at the prospect of automating out employees. They do not care that AI is unreliable and could never provide the same services and products that people can bring. They just want to cut jobs. Coca-Cola had to generate 85 minutes of AI generated Christmas ad footage just to get 45 seconds of usable understandable film.

Gen AI also requires enormous amounts of energy to even run these programs. The United States is at risk of overloading its already delicate and outdated electrical infrastructure. The cooling systems used for AI servers are incredibly wasteful. The energy needed to make just one Chat GPT answer evaporates one water bottle worth of water.

Even without thinking of the theft, invasion of privacy, the job loss and the energy use, Gen AI is antithetical to human learning and craftsmanship. Nothing ever can beat the nurtured skills of research and human expression. Gen AI wants to take that away from the American people.
