General Comment

Hello, I am speaking as both a freelance artist and a citizen of the US. I would like to say that any plan involving the use of generative AI (or any AI at the forefront) is a bad plan. It does not hold any future in the US that will bring prosperity.

It has gone from just a tool people use to make memes to one that corporations have used to attempt legal theft and plagiarism of ideas. It has also been used as a means to deny many people their jobs, and I fear it may come to a point where if left unchecked, every executive will lean on AI tools as a crutch to not pay their employees.

It has become an overhyped and fleeting fad that should not be given any leniency; so I urge whatever government official reads this, to put a stop to any AI-related plans in our governing body before it becomes immune to copyright lawsuits and is taken advantage of by those who only see people as walking dollar signs and nothing else.

This is a matter of livelihood and being able to afford to be a creative for a lot of people; artists, voice actors, movie actors, game developers, filmmakers, musicians, writers, and eventually the people who watch, read, view, listen, or play their work will be caught in the crossfire.
