General Comment

I make money off of writing, my fiancée makes her money off of writing and art. We've worked hard to master these skills and get ourselves to a level where we can feel comfortable earning an income with our abilities.

Artificial Intelligences like the kind OpenAI, Google, and Deepseek promote threaten to wipe out our income, and the income of thousands of other Americans, with their demands to create special exceptions in copyright law that allow them to steal, remix, and present material.

AI can *only* be generated by being trained to recognize patterns created by people. Our work, the work of hundreds and thousands of American creators, of creators across the entire world, has been fed to these machines with no consent or compensation. The machines regurgitate our efforts, and their owners sell it to people who would be our clients, cutting us out of the running for considerations.

Before, the copyright rulings said that Big Tech and AI could not copyright anything created by AI. Because it was stolen work, created by machines with little actual human guidance. Now the lobbyists of Big Tech are asking this administration, an administration put into place by the American People, to allow them to circumvent the need to compensate those hard-working Americans, steal their efforts, plagiarize their works, because cutting and pasting bits and pieces together counts as 'fair use' somehow.

It's a statement that says that as soon as something touches the internet, it is no longer the property of the people who own it.

They claim that by refusing to allow them to feed off of the blood, sweat, and tears of the American creatives like a swollen tick, this administration is stifling American Innovation. As if they are not stealing food from the mouths of the innovators their plagiarism programs are trained off of.

If the government will not protect creators and innovators, then why would they do that at all?

If the working man is not entitled to the sweat of his brow and the fruits of his labor, why would we perform that labor in the first place? How could we get paid if a machine will just take what we create and add it to its library of things to copy?

America's people, America's culture, America itself will stagnate if these programs are allowed free rein.

Siding with corporations to cripple the creators is not protecting the American people.

This administration's AI Action Plan should focus not on giving away creator content to Big Tech companies, but rather on ensuring a fair marketplace with competition:

First, the government should ensure that creators and everyday Americans give effective consent, so that we can decide when and where our work is used by AI systems.

Second, the AI Action Plan should encourage a robust licensing marketplace, so that the incentive to create for small businesses is preserved. Our work has immense economic value, so the value generated by that work should accrue to the original creators, not just Big Tech.

Finally, the AI Action Plan should require transparency from Big Tech companies, requiring them to disclose what material is in their training datasets, and label what content is AI generated.

I am not anti-technology or anti-AI. I am consistently impressed by the capabilities of these AI systems, and find them incredibly useful for many things. But we should not sacrifice the hard work of hundreds of thousands of Americans and give it away to Big Tech by rewriting copyright law.

Thank you for the opportunity to comment on these important issues.
