General Comment

Not only from a human standpoint, the current use of generative AI is directly counter-intuitive to SAVING on energy consumption. It costs significantly more energy-wise to use it than to "poison the well" via methods such as Nightshade and Glaze. Even without taking energy consumption into account, using human works WITHOUT PERMISSION in order to train generative AI models severely discounts the humans that made the initial works in the first place. GenAI wouldn't BE where it is without the HUMAN artists they STOLE from.

Generative AI is redundant. It is not beautiful. It has no soul; it is hollow, and it will not be valued as long as it is UNETHICALLY INHUMAN.
