## General Comment

The disregard of Copyright by the various AI companies has already harmed the various American artists and businesses who rely on Copyright for their income, and granting AI companies a fair use exemption will only make the problem worse. Not only is it bad for the economy, but it is ultimately self defeating, as there will be fewer copyrighted works for the AI companies to use as training data if it becomes less economically viable for those works to be created.

It is of utmost importance that AI companies properly license any copyrighted work their algorithms ingest, so that they don't destroy the industries that they rely on to exist in the first place. If an average individual was discovered to have been pirating works the way the AI companies have been, they'd almost certainly be criminally processed.
