General Comment

I DO NOT support "removing the guardrails" on the development of generative AI. Generative AI is not a necessary tool. I do not believe that generative AI holds a place in the future of the United States. If the learning models for generative AI cannot be further developed without unrestricted access to copyright material, then perhaps those who produce the learning models should reevaluate their own methods. Allowing generative AI learning models to have unrestricted access to copyright material will only further steal the creative output, time, and financial compensation from the original creators. The "tool" that is generative AI that the American public is being sold is unnecessary and far less capable than what the owners of the companies would have people believe. Unrestricted access to copyright material SHOULD NOT be given to an over-hyped "tool" that has already been trained on volumes of stolen, uncredited, and uncompensated creative work.
