General Comment

It should be illegal to use copyrighted materials to train artificial intelligence or large language models. It allows people to generate text using interpolations of copyrighted works of others without compensation or citations. OpenAI and other companies are taking advantage of the hard work and personal property of artists, and if they are allowed to do so legally, then personal property rights are permanently diminished. The government should have to meaningfully explain how private property and copyright can stand when these companies can run roughshod over your rights for personal gain.
