General Comment

I believe generative AI is a fad with no practical usage. It requires immense amounts of data to provide lackluster results and is not improving by whatever measures "improvement" is classified as by its creators. It requires too much electricity and water to run for, again, no benefit.

Personally, I find generative AI impractical, unimpressive, a waste of natural resources, and a mechanism to steal from the livelihoods of working artists and authors. I will not support generative AI and will actively avoid any media or products utilizing generative AI. I believe all existing and potential future models should NOT be permitted to train off copyrighted material. It has no future and no potential.
